

pH Training Courses

Our pH training courses offer a mixture of theory and practical sessions designed to ensure you get the best performance possible from your pH instruments. We can help you to improve the accuracy and repeatability of your measurements whilst reducing your analysis time and costs.

pH electrodes are sensitive measuring devices and should be cared for properly. We can show you how to increase electrode life through good laboratory practice:

- Electrode selection
- Construction of a pH electrode
- Calibration
- Filling Solution
- Buffer selection
- Standard operating procedures
- Rinsing
- Cleaning
- Maintenance
- Long and short-term storage

Our pH training courses are conducted at your site and are priced at £300 for up to 12 attendees. Courses are very versatile, allowing experienced users to refresh their knowledge and beginners to get the best starter training. All attendees on QCL courses will receive a Certificate of Training and support documentation.
