## Münsterländische Margarine-Werke J. Lülff GmbH has purchased a DairyQuant for analysis of solid and liquid margarine, milk based energy drinks and oils.

**Mr. Cress (lab) - Dr. Kerstin K pker – Mr. Schmied (lab)**

M nsterl ndische Margarine-Werke J. L lff GmbH in Rosendahl, Germany have for more than 125 years been a producer of a wide range of high quality milk based drinks and margarine products. In 2013 they acquired a DairyQuant from Q-Interline to perform rapid analysis of important parameters including moisture, salt, fat, protein and pH.

“We had been looking for a solution to optimize our production and our daily work routines in the laboratory. With the DairyQuant we are able to perform more analysis without increasing the work load on our lab. The DairyQuant is supplying results for all important parameters within 30 seconds, enabling us to optimize our production. Besides this we have strongly reduced the traditional chemical work, not only releasing time for other assignments but also eliminating the work with dangerous chemicals and handling of chemical waste” says Dr. Kerstin K pker, responsible for quality management and product development at M nsterl ndische Margarine- Werke J. L lff GmbH.

“We had limited experience in calibrating and using a FT-NIR analyser, but the team of Q-Interline supplied the DairyQuant with all relevant starter data and have followed us closely in the process of integrating the analyser. We have a high number of products and therefore a certain amount of calibrations had to be done, but Q-interline have supported us during all the time needed”. “The DairyQuant has completely fulfilled our expectations on performance and reliability. The DairyQuant is easy to operate and analysis can be performed by all relevant personnel.”

“We perform the mayor part of our analysis on the DairyQuant and are very happy to have been able to optimize our productivity and reduce time spent on traditional chemical analysis“ states Dr. Kerstin K pker.
