Cleaning The Fluorophos

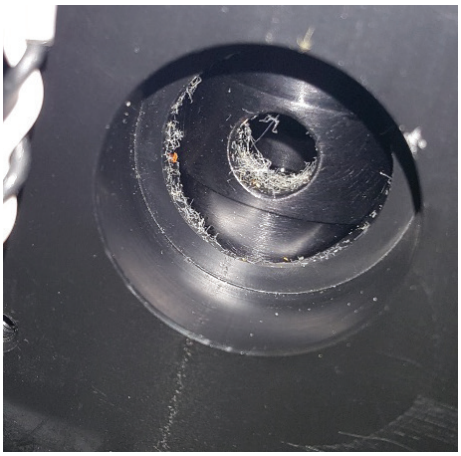
Fibre and Sponge Cleaning Sticks

There are two types of cleaning stick available for cleaning spillages on the Fluorophos ALP instrument:

- FLA840 Fibre Head
- FLA840/10 Foam Head

The fibre head sticks are sufficient for minor spillages, but heavy spillages require more pressure to wipe clean.

When the substrate is spilled and left to heat up within the optics block it turns thick and very sticky. When the fibre head cleaning sticks are twisted within the block the fibres shear off and block the light pathway, either by build up within light apertures, on the actual lenses or on the mirror.



Fibres in the block

Fibres on the lens

Fibres on the mirror

Using foam head cleaning sticks should completely eliminate this issue.
