Hambledon Wine Estate

Hambledon Wine Estate is one of England's pioneering producers of traditional-method English sparkling wine. Located in Hampshire, the estate's wines are crafted with a focus on precision, quality and the expression of their unique Newhaven Chalk terroir.

As part of their commitment to maintaining high standards of winemaking, accurate and timely analytical data is essential throughout the production process. From monitoring fermentation progress to making informed decisions around malolactic fermentation, blending and wine stability, reliable laboratory analysis plays a vital role in their day-to-day operations.

To enhance their in-house analytical capabilities, Hambledon invested in the BioSystems Y15 automated wine analyser, supplied by QCL. The system allows Hambledon to carry out a wider range of analyses onsite, providing valuable information to support their winemaking decisions.

"The Y15 has been a valuable addition to our winery laboratory, allowing us to analyse multiple samples across a range of parameters simultaneously. This has significantly improved our analytical capabilities and efficiency, particularly during busy periods when having access to timely results is essential for making informed winemaking decisions.

The ability to carry out a wider range of analyses in-house has been a real benefit to our production process, giving us greater flexibility and confidence in monitoring our wines throughout their development.

Equally important has been the support we've received from QCL. Their service and technical support have been fantastic. Having that level of support has been invaluable in getting the most out of the analyser and integrating it into our day-to-day laboratory work.

Overall, the Y15 has been a worthwhile investment for Hambledon, and we would be very happy to recommend both the analyser and QCL."

Jack Williams
Assistant Winemaker, Hambledon Wine Estate
